

With more than 25 years of experience

creating software for electric, gas, and water utilities, TESCO knows your business and the data you need in a post AMI world. Meter Manager provides lifetime inventory and asset management that seamlessly integrates with all metering operations.

Meter Manager has been designed from the ground up to meet your current and future needs. Built with state-of-the-art tools and a modern architecture, Meter Manager continues to evolve with new and expanded features for you.

From municipal and cooperative customers, to larger multi-company, investor-owned utilities, TESCO has installed Meter Manager for utilities collectively managing nearly 40 million meters in the United States. The software is compatible with multi-vendor AMI programs, as well as enterprise systems (e.g. SAP and Oracle), and mid-market financial systems.

As Meter Manager expands to meet our customers' requirements, more out-of-the box functionality is available to meet your needs. Our integration technology provides the maximum functionality with the quickest implementation.

Let Meter Manager assist you with:

- Inventory and asset management
- Integration with Test Boards
- Hand-held and mobile devices
- Meter Shop and Field Operations
- Personal Protection Equipment asset tracking and testing schedules and compliance
- Managing and tracking of all equipment requiring calibration and associated due dates

Advancing business process optimization for metering by providing capabilities that support AMI initiatives and modernization.

Cradle to grave inventory management and tracking of assets and their configurations

- Electric, gas, and water meters
- Configurations and attributes
- Firmware/software versions
- Multiple communication and network devices

Business Process Automation

- Automated inventory (mass updating using manufacturer's files)
- Handheld scanners for test board setup, shipments and receipt of materials and processing
- Inventory movement and tracking
- Automated periodic testing notification for scheduled maintenance
- Test results management and historical data tracking

Dashboards and Reporting

- Management dashboards
- Productivity and performance reporting
- Regulatory reporting and compliance
- Ad-hoc reporting and analysis
- Transparency of data across the enterprise

Business Process Management

- Robust, reliable, and easy to use
- User-defined fields enabling data mapping to legacy systems
- User defined sequences and tasks
- Flexible security allowing both group level or individual role access
- Audit logging

Contact TESCO today for more information on how Meter Manager can help your business. Call 215.785.2338.

Meter Manager Modules

Meter Shop: ordering, receiving, testing, acceptance, retirement, tracks test board standards, calibration date, required test schedule, tested by, traceability to NIST, and tracking of other test equipment and required calibrations.

Meter Inventory: tracking of meters not installed in the field and includes RMA tracking as part of this module.

Meter Records: all meter attributes as well as ancillary devices associated with a meter (e.g. AMR/AMI modules).

In-Service Testing: random sample testing.

Site Verification: stores site specific equipment information, manages tasks and appropriate resource allocation, maintains site/premise specific information such as GPS coordinates, equipment attributes such as CTs and PTs, etc.

Personal Protective Equipment: PPE and tool tracking, and scheduling of calibration/test dates.

RMA Processing and Tracking: for the tracking of hardware sent back to the various vendors/manufacturers for meters and ancillary equipment both in and out of warranty.

Hardware Devices Supported:

- Supports all meter test boards, provers, and field test equipment
- Supports broad range of modern barcode and imaging scanners
- Supports Zebra barcode label printers
- Supports modern handheld computers with built-in scanners
- Supports PCs, laptops, and tablets with native Windows client and browser client
- Support for iOS and Android devices

Reporting Functionality:

- Report definitions are stored in the database, allowing new reports to be added without code changes
- Titles and report parameters can be changed, and default values can be stored
- Reports can be exported to PDF or XLS files
- Users can design their own reports and add them to Meter Manager for other users
